

THE UNIFIED PROMAIA VISION

INGESTING THE DIGITAL LIFE.

Systematic acquisition and structuring of vast digital data streams to establish foundational knowledge bases. // Source: Global Digital Footprint Analysis (GDFA).

UNDERSTANDING THE HUMAN MIND.

Deciphering cognitive processes and behavioral patterns through advanced modeling of human intelligence. // Source: Cognitive Science Research (CSR) v4.5.

The Enterprise-Grade Digital Nervous System

The Foundation

A production-grade content engine treating scattered applications as a single, normalized database.

v.1.0 // cere_principles

The Capability

It does not just connect—it internalizes, ingests, and queries your entire digital life across platforms.

Abstracting the Chaos: The Connector Registry Architecture

Each connector inherits an abstract
base class, making platform
extension trivial.

v.1.0 // cere_principles

The Crown Jewel: Agentic NL Query Processing

Over 1,000 lines of self-learning
intelligence utilizing a parallel
Strategy Pattern.

v.1.8 // cere_principles

DATA FLOW // SYSTEM ARCHITECTURE // PROPRIETARY SCHEMATIC

DATA FLOW // SYSTEM ARCHITECTURE // PROPRIETARY SCHEMATIC

Multi-Workspace Scale & Enterprise Reliability

Treats multiple life domains as one seamless query interface without compromising boundary integrity.

v.1.8 // core_principles

Scale

Manages multiple accounts, servers, and inboxes simultaneously.

Reliability

Cron-scheduled syncs ensure data freshness. Graceful retry logic catches connector timeouts.

Routing

Intelligent multi-LLM adapter routes between Anthropic, OpenAI, and Gemini with automated fallbacks.

MuninnDB: The Cognitive Memory Substrate

Postgres stores the facts. MuninnDB stores the significance.

Associative Network

Sub-20ms associative recall via the ACTIVATE pipeline.

Tiempos Text

Auto-Decomposition

Thoughts are automatically broken into Decisions, Insights, Preferences, and Asides.

Tiempos Text

Organic Lifespan

Important memories strengthen; unused data quietly decays.

Tiempos Text

The Real-Time Bidirectional Voice Bridge

Standard AI (Sequential Walkie-Talkie)

DATA FLOW // BIDIRECTIONAL REAL-TIME // PROPRIETARY SCHEMATIC

Promaia Dual-Stream Architecture

DATA FLOW // BIDIRECTIONAL REAL-TIME // PROPRIETARY SCHEMATIC

Ambient Personal Profiling & Cognitive Routing

Every installation becomes a highly specific personality, continuously adapting through interaction.

98-Dimension Profiling

Adapts to chronotypes, detail-tolerance, and neurodivergence.

Transparent Source Tagging

Explicitly tracks traits as Declared, Inferred, or Confirmed.

De Bono Mode Switching

Instantly route personality mid-conversation via Six Thinking Hats voice command.

MAPPING KAPPRO

Anticipatory Intelligence: The Proactive Agent System

Not a reactive chatbot. An ambient, anticipatory companion.

Preempts the day with calendar, pending actions, and project attention.

MICRO-ANNOTATION: DIURNAL SYNCHRONIZATION // TASK PRIORITIZATION

Continuous triage, surfacing critical mail within two minutes.

MICRO-ANNOTATION: REAL-TIME LATENCY OPTIMIZATION // CRITICALITY SURFACING

Momentum-focused recaps designed around your daily energy patterns.

MICRO-ANNOTATION: BIORHYTHMIC ALIGNMENT // COGNITIVE LOAD BALANCING

The Synthesis: 1 + 1 = The Unprecedented

Structured Data Grid

RAW DATA INGESTION // SCHEMA OPTIMIZATION

Josie built the ultimate foundation to ingest
and structure your digital life.

Cognitive Neural Web

UNDERSTAND & REMEMBER // CONTEXTUAL LEARNING

We built the ultimate interface to understand,
remember, and speak.

Unified Promaia

ACT 3 SYNTHESIS // UNPRECEDENTED PLATFORM

Together, Promaia is the only platform capable of all four:
Ingest, Understand, Remember, Act.

Unlocking the Synergy Points (1-4)

1. The 3rd Query Strategy

SQL + Vectors + MuninnDB's associative network fire in parallel. Exact data meets off-hand memory.

2. Voice-Activated Workspaces

Drive a car and ask a Discord question hands-free. The voice bridge queries the connector registry instantly.

3. Thought-to-Project Sync

Speak a task out loud. Dynamic schema discovery automatically pushes a structured record directly into your Notion database.

4. Cognitive Hydration

Synced Markdown files actively enter and populate the cognitive memory graph.

Unlocking the Synergy Points (5–8)

5. Supercharged Agents

Morning briefings synthesize live Notion project data, overnight Discord updates, and personal memory.

6. OCR to Memory

Snap a photo of a whiteboard. Text is hydrated into the cognitive graph, answerable via voice weeks later.

7. Profile-Guided Queries

Natural language results adapt to your profile. Detail-oriented users get depth; interest-gated users get highlights.

8. Preference Memory

Successful natural language query patterns become Hebbian memory engrams, making the system faster.

The TypeScript Unification Architecture

A ground-up rebuild, not a bolt-on integration.

The Node.js Solution

Node natively handles async event loops, allowing heavy data syncs and 24kHz voice WebSockets to run concurrently without blocking.

The Result

One single, unified TypeScript codebase utilizing shared interfaces.

The Compound Effects Matrix

Intersection	The Unlocked Capability
Content Engine + Memory	Answers from databases AND past conversations.
Voice + Content Engine	Browse workspaces hands-free.
Agents + Memory	Briefings that know what you decided out-loud yesterday.
Connectors + Memory	Structured data + associative recall.

The Loyalty Layer & What Comes Next
